Dr. Joshua Lederberg
Dept. of Genetics
College of Agriculture
University of Wisconsin

Dear doctor Lederberg:

Thanks for the reprints. I shall be happy
to exchange.

The manner of growth of bacteria has interested
me for several years. I have several ideas on how to tackle the
problem and I hope to do some experimental work on the problem this
Summer. It is quite possible Bisset is correct that there is an
old-young polarity but more definite proof is needed.

I shall be happy to furnish you with a variety
of polar flagellates. Some of these cultures have showed predominantly
monopolar flagella and some predominantly bipolar flagella in the
log phase. Let me know specifically what you want and I shall try to
accommodate you.

Sincerely yours

Elmer Teijon
